

DEEPAK A

Full-Stack Developer | Flutter & Mobile Engineer | Backend & AI Enthusiast
deepak621ssaa@gmail.com | +91 9790213560 | github.com/deepakssaa | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Analytical and solutions-driven Computer Science Engineering student with hands-on experience architecting end-to-end applications. Proficient in cross-platform mobile development (Flutter/Dart), robust backend microservices (Spring Boot/Java 17), web applications (React, Flask), and AI computer vision pipelines (PyTorch, YOLO). Delivered production-ready applications including a Play Store published app with 100+ installs and custom WooCommerce integrations generating active client revenue. Skilled in containerization, API development, and secure authentication flows.

EDUCATION

B.Tech in Computer Science and Engineering

Puducherry Technological University | Final Year (Batch 2023 – 2027)

TECHNICAL SKILLS

Languages: Dart, JavaScript (ES6+), Python, Java 17, SQL, C, C++

Backend: Spring Boot, Flask, .NET, RESTful APIs, JWT, Eureka Service Discovery

Mobile & Frontend: Flutter, Android Studio, React, HTML5, CSS3, Figma

Databases & Cloud: Supabase, MySQL, MariaDB, WordPress, WooCommerce REST API

DevOps & Tools: Docker, Kubernetes, Git, GitHub, PyInstaller

AI / ML: PyTorch, YOLOv8/v9, ResNet18, TorchScript

KEY PROJECTS & EXPERIENCE

Speedy — Food Pre-booking Microservices Platform

Backend Developer | *Stack:* Java 17, Spring Boot, Supabase, Netflix Eureka, Razorpay, JWT

- Engineered a scalable microservices architecture using Spring Boot and Java 17 for real-time food pre-bookings.
- Integrated Netflix Eureka for dynamic service discovery and client routing across independent microservices.
- Implemented JWT token authentication and custom partial payment (50% upfront) processing via Razorpay API.
- Managed structured user schemas and data using Supabase for secure, high-availability storage.

Web Component Intelligence (WCI) — UI Component Classifier

AI Research & Software Developer | *Stack:* Python, YOLO, ResNet18, PyTorch, TorchScript

- Developed an end-to-end computer vision pipeline to automate UI/UX audits by detecting and classifying web components from static mockups.
- Fine-tuned YOLO object detection and ResNet18 image classification in PyTorch, achieving high precision on nested components.
- Deployed models using TorchScript, compiling the pipeline into low-latency executables optimized for CI workflows.

Suja Creations — E-Commerce Mobile App & Platform

Lead Mobile & Full-Stack Developer | *Stack:* Flutter, WordPress, WooCommerce REST API, Razorpay, Firebase Cloud Messaging

- Built and launched a production-grade cross-platform mobile storefront in Flutter/Dart connected to a custom WooCommerce backend.
- Engineered secure user accounts, product variation cards, inventory checks, and direct Razorpay SDK checkout.
- Developed backend trigger scripts for real-time marketing notifications via Firebase Cloud Messaging.

- Published on Google Play Store — 100+ active installs, driving ₹10K+ in recurring monthly client sales.

Automated Shipping Label Generator

Full-Stack Python Developer | *Stack: Python, Flask, WeasyPrint, PyInstaller*

- Created a Flask microservice that parses disorganized multi-line billing/shipping addresses into standardized label layouts.
- Configured WeasyPrint PDF engine for high-fidelity rendering of complex Tamil Unicode typography.
- Packaged the service as a standalone offline .exe using PyInstaller for immediate client deployment.

JustBins — Smart Waste Management Platform

Frontend & IoT Developer | *Stack: JavaScript, IoT Telemetry, REST APIs, CSS3*

- Designed and built the dashboard interface for an IoT-based smart city waste management platform.
- Integrated simulated IoT sensor APIs to display real-time bin occupancy, heat indicators, and collection statuses.
- Built dynamic route visualizations to minimize municipal waste collection overhead.

WeatherNow & Currency Converter (Android Utilities)

Mobile Developer | *Stack: Flutter, Dart, OpenWeather API, Exchange Rate API*

- Authored and optimized two utility apps distributed as standalone .apk packages.
- WeatherNow: async location services, 3-hour interval cached forecasts, responsive UI.
- Currency Converter: dynamic flag rendering and instant conversions via exchange rate REST APIs.

KEY ACHIEVEMENTS & SPECIALTIES

- Mobile Publishing: Proven end-to-end capability — from Figma design to Flutter implementation to Play Store launch and marketing.
- Backend Architecture: Deep expertise in microservice decomposition, JWT security, API gateways, and async webhook operations.
- Figma to Code: Skilled in translating complex visual layouts and animations into responsive UI components (React/CSS/Flutter).
- Languages: English (Professional Proficiency), Tamil (Native)
